

INHALATION AIDS

For inhalative metered dose inhalers against bronchial asthma, front-end aids are used.

Development and design:

- Implementation of the design and functional specifications in processes appropriate to production under consideration of all medical specifications.

Production, assembly and logistics:

- 100% vertical integration from the raw material to assembly to the sellably packed product in cleanroom technology
- Respiratory masks and valve membranes made of liquid silicone, front-end aid made of plastic injection moulding
- Supplier management as well as implementation of more than 50 different country-specific packaging solutions including multilingual leaflets and customised, international logistics handling
