Polymesh Composite

Partially Absorbable Mesh

Polymesh Composite is a partially absorbable knitted mesh. The knitted structure is constructed by 50% polypropylene (nonabsorbable) and 50% PGA-PCL (absorbable) which provides its strength and softness. Absorbable part of mesh is homogeneously absorbed in 90-120 days and provides maximum patient comfort. Polymesh Composite is compatible with body moves. It can be cut to any sizes and shapes without leaving mesh particles. Polymesh Composite does not damage tissues, it has soft edges.

Polymesh Composite can be used for open surgery and laparoscopy. It can pass through trocar easily. Polymesh Composite has coloured lines to provide better visibility.

Before Partial Absorption

During Partial Absorption

Code	Dimension	Packaging
SCM611	6 cm x 11 cm	1 per box
SCM715	7,5cm x 15 cm	1 per box
SCM1012	10cm x 12 cm	1 per box
SCM1015	10cm x 15 cm	1 per box
SCM1515	15cm x 15 cm	1 per box
SCM1530	15cm x 30 cm	1 per box
SCM3030	30cm x 30cm	1 per box
SCM2621	26cm x 21 cm	1 per box
SCM2630	26cm x 30 cm	1 per box
SCM2634	26cm x 34cm	1 per box
