What is Green Cube

Green Cube is an advanced **third generation** Electronic Clinical History that covers the management of any health center or health network in each of their areas. **This includes a complete and integrated management solution** of different processes and workflows, establishing interactions between all the different Clinical segments and centers

The patient's Clinical History is accessible from **Anywhere – Everywhere** (Health center, mobiles, internet, Telemed etc.), always complying with the highest regulations of data security. All results in a higher quality of care, with cost control in mind

Green Cube: Thinking about the Patients

- **Green Cube** allows direct communication with patients via different technological platforms:
- Sending **information via messages (SMS)** for example, appointments, relevant information to the patient etc.
- Internet. Through the web portal, the patient can consult information about his own clinical history **and interact with the doctor who can see the follow-up of his pathology**
- Interactive information points. Via these devices, the patient's family can get real time information of the clinical situation in the process. Also, using these devices can see the **administrative management made by the patient** (Appointments, arrivals for the appointment etc.)

Green Cube, Thinking about the Professionals

- **Green Cube** is based on a **work list concept**, which allows the professional to interact easily in an intuitive form
- Also the Medical professional has a **summarized vision of the medical history** that provides consulting with a quick visualization of the different evolutions, tests, interventions, Patient history etc.
- Interacts directly with all Medical professionals through **medical alarms and sending relevant information automatically**

Green Cube, Thinking about the Managers

- **Green Cube** has a powerful integrated scorecard, which has multiple indicators in different welfare and non welfare areas that allows the manager real time information and to compare it with previous periods for his evaluation
- These **indicators can be customised** by the user, so each of them visualizes his own dashboard adapted to his needs of information
- The system works as a **facilitating tool of the management of the processes** with automatically and staggered alerts (according to established levels of supervision), when certain metric welfare quality exceeds

Balanced Scorecards

MEDICAL SCORECARDS

ECONOMICAL SCORECARDS

HOSPITAL GROUP SCORECARDS

CLINICAL INDICATORS

REPORTING SERVICES

LOGISTICS - PROCUREMENT

INDICATORS

Shows the profitability of each of the realised processes

Green Cube, Thinking about savings cost and income

- **Green Cube** allows the follow-up of the costs and expenditure at all levels as the system registers the use of sanitary materials, pharmaceuticals, equipment, use of equipment etc in detail
- It allows **full management of billing** processes and for particular patients, allowing the configuration of billing rules for each case
- It manages the **logistic planning and purchasing** of supplies, including a record of consumptions

How can you take advantage of the information in real time?

Third Generation Clinical History and Management Solution

Green Cube Proven around the Globe

- **Green Cube** Is proven in various countries by Health Systems and Clinical facilities around the Globe for over a decade
- Fully localised in various languages
- **More than a clinical record, including Management, Billing and (New) Dental Module**
- Proven Cost savings with Better Patient Care
- **Ease of integration with (Vannin HC) Telemedicine solutions**
- Following the highest Data and Data Security Standards
