Bittium Tough Mobile™ set a new standard for ultra-secure mobile communications. The compact smartphone is equipped with unparalleled hardware- and software-based information security features and reliability. The tamper-proof information security platform, privacy switch, and secure telephony and data access provide reliable and secure communications and handling of data regardless of users, professionals, and authorities.

Bittium Tough SDR™ product family includes Bittium Tough SDR Handheld™, tactical handheld radio for individual soldiers, and Bittium Tough SDR Vehicular™, tactical radio for vehicle installations. The radios are designed to produce real-time threats from situational awareness at all levels of the organization. The technology has won multiple awards for the technical innovation, and leading the technology in secure, reliable communications and more reliable connections.

Bittium offers 3G/4G/5G base station development and frequency variant development services for OEM's globally.

Bittium's Faros™ devices are innovative tools for monitoring ECG, HRV, stress, recovery and general well-being. CE and FDA 510k approved.

Connectivity to be trusted.
