

Loading and unloading systems for inspection and packaging lines

ASYS Life Science

Automation in the Pharmaceutical Industry: ASYS Life Science Convinces

A well-known Swiss pharmaceutical manufacturer relies on fully automated handling solutions from ASYS Life Science. The experts at ASYS TECTON are developing and implementing several loading and unloading systems for inspection and packaging lines in the production of liquids.

In order to realize the solution designed by ASYS, a holistic approach was chosen, taking into account the entire logistics concept of the customer. The aim was to automate the previously manual processes. For this purpose, ASYS developed a corresponding solution for the internal transport in close cooperation with the customer. With system solutions from ASYS TECTON, the fully automated loading

and unloading of vials at the inspection and packaging lines could be realized. All line components are connected to the customer's MES system via an interface implemented by ASYS. In order to ensure that all lines are GxP-compliant, the validation experts from ASYS Life Science provide the appropriate qualification documentation.
