## Concepts

### Image control

For many years, m-u-t has been a pioneer in image control in laboratory automation. The first systems for the fast and safe determination of tube types based on the tube geometry and the cap color come from m-u-t. Today, our camera-based systems offer the ability to determine or assess many parameters, e.g.

- Tube geometry
- Cap color
- Various types of barcodes
- Alignment of the barcode
- Correct fit of the cap
- Damage at the label or tube
