

Packaging Solutions as Unique & Innovative as Your Device

We offer free prototyping and design services to create the ideal packaging system for your medical device.

Design & Prototyping Services

With decades of experience in design, quality, regulatory and manufacturing, Oliver Healthcare Packaging has the expertise needed to produce the most innovative, efficient and safe packaging for your device.

We not only design packaging to safely and securely retain your device, but also to reduce cost, packaging waste and space.

Even if your device is still in the concept stage, we can begin designing your packaging by producing a 3D model of your device for product fit verification – putting you ahead of the game!

Our cutting-edge designs have been honored with numerous awards for packaging innovation.

Design and prototyping services are performed under strict compliance with full traceability, and in controlled manufacturing environments.
