Dialife, Swiss Quality Dialysis. Premium Dialysis Devices & Technology Transfer.

Based in Switzerland, Dialife is a global provider of high-quality products, equipment and services for renal care. Our organization benefits from over forty years of experience in the development and production of devices for hemodialysis, along with the installation and servicing of renal units.

At a glance

Dialife offers a broad and diversified range of competencies within the dialysis field, with a constant emphasis on quality and a flexibility to adapt to specific requirements.

Some of Dialife's key features include:

- Dialyzer line portfolio among the largest and most versatile in the industry.
- New generation of premium dialysis machines with advanced functions.
- Capability to conceive, install and service dialysis centers on a turn-key basis.
- Strategic partner for the establishment of new manufacturing lines for dialysis products.

Dialife is presently active on 4 continents.

Dialysis devices

Our team began manufacturing dialyzers in the late 1970s and as such is one of the most experienced organizations in the fields of dialyzer design, development, production and quality control.

Dialife also offers DIADVANCE Series dialysis machines, with state-of-the-art technology, yet simple and easy to use.

To complement treatment requirements, Dialife manufactures a full range of high-quality disposable products for hemodialysis.

Each component is sourced from world-class providers and composed of the highest quality raw materials. Dialife approaches every aspect of product development with a focus on safety, patient comfort, ease of use and optimization of treatment outcome.

As a result, Dialife's devices are ranked among the highest quality devices available in the industry.

Dialysis projects

Over the past two decades, our group provided a significant contribution to the development of infrastructures for renal care and is eager to support new projects in this regard.

Specifically, Dialife can design, procure, set up, operate and/or maintain renal units on turnkey basis at any location worldwide.

In parallel, when local manufacturing makes strategic sense, Dialife can pilot the establishment of new production factories for dialysis devices, from initial plans to market introduction.
