

Speed up your business –
with our expertise in
ventilation

Your customized
solution in

- Development
- Approval
- Components
- Production

Why Corscience?

...because we know your market.

We are experts in transport and emergency ventilation and transfer our know-how to your market.

As a one-stop-shop, we think and act holistically: we not only focus on ventilation performance and ventilation modes, but also on usability, connectivity to other systems and mechanical robustness.

Our expertise in the field of ventilation:

Development

- Ventilators for emergency, transport, home or intensive care
- Graphical user interfaces for monitoring and alarm management including PC software and medical apps
- Reliable electronics for safety-critical systems
- Modern and secure interfaces to enable connectivity in mobile and clinical environments
- Robust designs for mobile solutions used in rough conditions

Components

- Easy and fast implementation of our capnography (CAP201) and pulsoximeter (ChipOx) modules
- Access to established ventilation technology and components due to our affiliation with the WEINMANN Group

Your benefits

- 20 years of experience in development
- Fast and easy product approval according to latest international regulation (EU and US markets)
- Reliable modules and algorithms
- Large-scale production of safety-critical systems

Our competences

- State-of-the-art technology and systems engineering
- Development up to product class 3 and software class C
- Development and design based on the principles of functional safety
- Highest quality from small-to large-scale production
- Flexibility in terms of logistics, business models, modular systems and customer structure
