DECLARATION: ECOLOGICAL VISION

We are using “Comber” cotton, which is a very good fiber, long, but not enough for spinning industry. Thus we are promoting recycling while using comber instead of raw cotton.

Regarding our cotton bud, we have substitute plastic rod by 100% paper rod. We currently sell this product which combines efficiency and ecology. This is meeting new standard.

In addition to that, plastic bags used for the packaging are made from recyclable polyethylene. All our wastes are fully recycled. For instance, our used carton and paper are sent to a charitable association, our cotton waste is sold to a company manufacturing acoustic panels.

Concerning the implantation of our structures we are also trying to be as eco-responsible as possible. Indeed, our structures are equipped with photovoltaic panels producing 540 kWc, for a total annual production of 486.000 kWh/an. This represents the annual consumption of 120 average households. These panels substitute at 100% roof and wall from our warehouse.

Production is made in Belgium which is reducing our carbon footprint. Even though our raw material is coming from Turkey or Pakistan, final product is 12 times the volume of raw cotton, so carbon footprint is reduced the same way.

Lastly, we have conceded a land parcel to young persons who are cultivating a fruit and vegetable garden. They also installed hives to produce honey.

We are ISO 13485 certified and our products are CE marked
Nous sommes certifiés ISO 13485 et nos dispositifs sont homologues CE
