

About Andon

Established in Tianjin, China in 1995, we Andon design and manufacture healthcare products for its OEM and ODM customers that make it simple to test, manage and share health information. These products we apply for clients include blood pressure monitors, glucose meters, TENS / EMS devices, digital thermometers and fetal dopplers. Andon listed on the Shenzhen stock exchange in 2010 and is considered as one of the most progressive companies of its kind in China. The company has received numerous local and international awards including the prestigious Red Star innovative Design Award of China 2007 and several Red Dot industrial design awards.

The Andon factories are certified according to the stringent ISO 9001, ISO 13485, and MDSAP quality management systems and our blood pressure monitors are validated against the exacting standards of the BHS (British Hypertension Society), the ESH (European Society of Hypertension) and are (of course...) approved for sale in the EU and by 510K.

Andon has

- Understanding of the market
- High-end research & development
- High-quality large-scale production
- The largest choice of OEM devices available
- Low tooling costs
- Low production costs

PLUS X AWARD®

Andon's production and development team is 100% focused on delivering OEM and ODM solutions for some of the largest (and smallest) brands in the world. Our factory in Tianjin employs 1500 workers, with more than 140 dedicated R&D engineers that are focused on finding new and innovative solutions for our partners.

With three facilities over 3 continents & 3 countries (Factory in Tianjin; Subsidiaries in California and Paris), Andon can offer you bespoke OEM/ODM solutions with a complete understanding of your worldwide requirements.
