

Treponema pallidum LINE

With recombinant antigens

VIROTECH *Treponema pallidum* LINE for the quantitative detection of **Treponema pallidum specific IgG- respectively IgM-antibodies in human serum**. The kit can be used as a confirmation test for an extended **Syphilis diagnostic**, in case the result of the screening test is suspicious or positive. By using recombinant proteins a high specificity for all stages of infection is achieved.

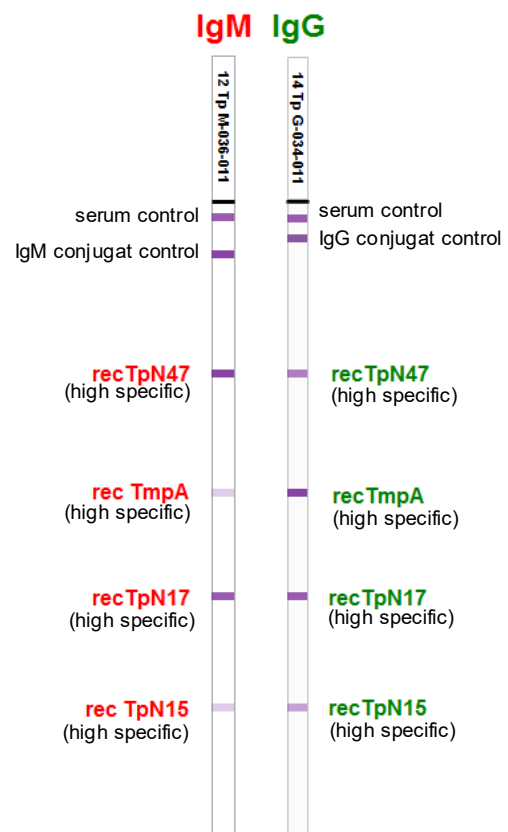

Easy and Secure Handling

- Sorted strips in a booklet
- Clear strip numbering
- Quality control on each strips
- Identical incubation times
- Test results after approx. 100 minutes
- General components
- Cut off control included in the kit
- Neg./pos. control separately available

Specificity and Sensitivity

	Specificity	Diagnostic Sensitivity (IgG + IgM)
IgG	99,2 %	100 %
IgM	98,6 %	

VIROTECH *Treponema Pallidum* LINE

Product / Format	Order No.
Treponema pallidum IgG	
16 Tests	WE150G16
32 Tests	WE150G32
IgG positive control	WE150P60
Treponema pallidum IgM	
16 Tests	WE150M16
32 Tests	WE150M32
IgM positive control	WE150P80
IgG/IgM negative control	WE150N10
