

# FSME/TBE IgG/IgM ELISA for serum and CSF

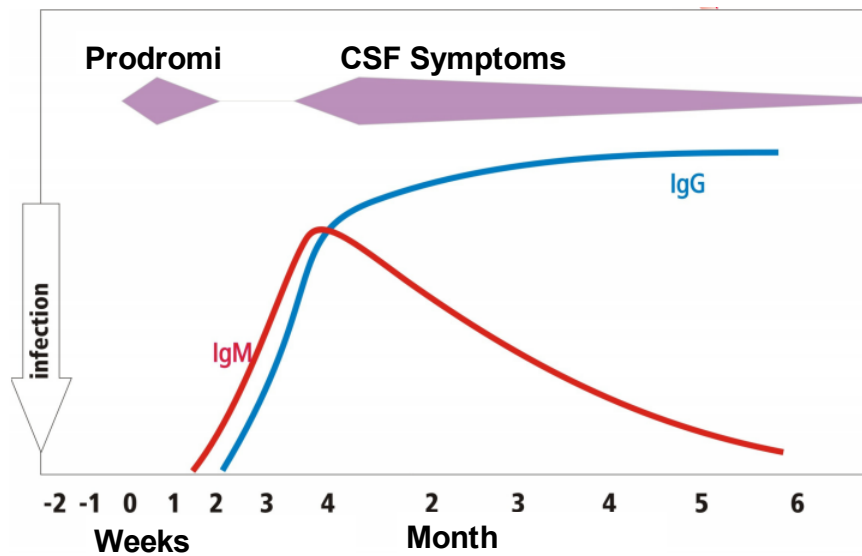

## Indication for antibody determination by ELISA

The VIROTECH FSME/TBE ELISA detects IgG and IgM antibodies and is intended for the detection of an acute or recent infection with Tick-Borne-Encephalitis-Virus (TBE) or for the detection of vaccination antibodies.

- Detection of **seroconversion** after vaccination
- Detecting an apparent or non-apparent infection with the TBE virus
- **Antibodies monitoring** after infection
- **Differential diagnosis** to other **CNS** diseases
- **Differential diagnosis** to **Lyme disease** after tick bite
- Antibody detection in **CSF**

## Serological course of a TBE-infection\*
