

Increasing surgical volumes and margin by implementing an enterprise solution for block management and reporting

Overview

Caresyntax, the leading provider of data-driven perioperative management and analytics tools, was approached by a major US health system to help implement an enterprise solution for block schedule management and reporting. Their goal was to improve productivity and staffing efficiencies through streamlining the processes for block management and block utilization measurement.

“In the first year, across the enterprise they experienced...”

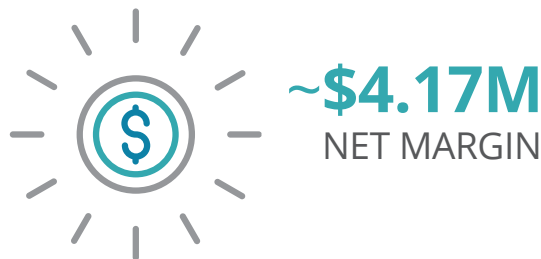

Results

The increased visibility and access to clean data enhanced the collaboration from internal IT and clinical teams. The team reached a consensus on how block utilization would be calculated and managed. They established system-wide utilization targets and a standardized approach to communication with surgeons on block performance. The Caresyntax solution was implemented and began distributing detailed quarterly block utilization reports and monthly surgeon letters to the health system’s corporate teams and individual hospitals.

“The improved utilization resulted in...”

ADDITIONAL CASES

Using the Caresyntax tool, **Periop Insight**, this health system now has timely access to their block utilization data. Their OR leaders are also providing performance metrics to their surgeons monthly. They have achieved their goals and are comparing performance and goal attainment across the enterprise for continuous process improvement.
