

# Do you trust your preference cards?

**2,000 tons**

amount of surgical waste operating rooms generate per day

**\$5 billion**

amount of wasted surgical supplies each year due to inaccurate preference cards

**26%**

amount of case time circulator spends gathering surgical supplies

**17%**

percentage of surgical supplies that go unused

## The Problem

### A lack of access and transparency into supply and implant usage data

Staff do not have access to 'real' supply usage data to make informed decisions on surgeon preference cards. It is estimated that preference cards contain 20-40% more supplies than are needed. Without access to supply usage data, surgeon engagement and supply cost standardization is impossible.

## The Solution

### Better access to real, transparent supply and implant usage data

With Periop Insight, you have access to real case supply and implant data to help drive meaningful and data-driven preference card changes. You can drive surgeon and administration engagement by benchmarking supply and implant costs across all surgeons and procedures at your facility as well as against facilities around the US.

## About Periop Insight

Periop Insight is a data analytics solution for today's busy perioperative leaders to improve their OR performance. Periop Insight eliminates the hard, endless work of getting the information you need to run your OR, giving you the tools to make better decisions, share your insights and engage surgeons and administrators.

## Periop Insight helps you with:

### Better Access to Data

Gain insights into actual supply and implant usage data as well as internal and external comparisons across your surgeons, specialties, and procedures. Have access to real, actionable supply and implant data at your fingertips.

### Preference Cards Management

Eliminate the manual, endless work involved with preference card management. Using Periop Insight, you can track supply and implant usages across all surgeons and procedures to make informed, data-driven decisions.

### Cost Standardization

Benchmark supply and implant costs and usage across all surgeons at your facility as well as facilities around the US. Drive supply and implant standardization across your facility.
