

Fujita Medical Instruments is a surgical and neurological medical instruments manufacturer as well as a distributor of various medical products. We were established in 1972. Thanks to our long expertise and ingenuity within the field, our high-quality instruments are used all over Japan in various renowned hospitals and universities.

The bulk of our ever-expanding catalog consists of neurological surgical instruments. Our other equipment consist of, a non-invasive local saturation monitor (TOS) and a highly portable vital signs monitor. TOS can, whereas many other devices' lowest measuring point is 40%, measure the oxygen saturation in blood as low as 0%. The portable vital signs monitor is a fully working vital signs monitor that is small and portable enough to fit nicely in a space as small as a handbag. Naturally, we also help with installation and servicing of our products.
