

## 1<sup>ST</sup> APPLICATION: PEDIATRIC LUMBAR PUNCTURES

In addition to pediatric ALL-patients Injeq IQ-Tip® system has been evaluated also in the lumbar punctures of 29 neonates. In this study, conducted in two University Hospitals, a CSF sample was successfully obtained in 75% of the neonatal punctures. The Injeq IQ-Tip® system can substantially improve your puncture success rate in neonatal CSF samples, leading to faster diagnosis and treatment, and eventually saving little lives.
