- Major Products**  
ECG machines, patient monitoring devices,  
Fetal monitoring devices and the  
development of hardware and software.

## Company Introduction

Established in 2000 with the company's dedication to customer satisfaction(Satisfaction), best quality products (superiority) and expertise (specialization), Trismed now develops, manufactures and sells the best quality medical monitoring devices including ECG machines, patient monitoring devices and fetal monitoring devices based on its cardiac diagnosis technology that satisfies international standards in pursuit of the goal to become the leader in the medical monitoring device industry.

## Major Businesses

More preventive and medical measures are now required to appropriately cope with the increasing number of patients diagnosed with cardiovascular diseases, which has been propelled by the rising population of the elderly as well as economic development. In response to the demands, Trismed develops and manufactures medical monitoring devices including ECG machines, patient monitoring devices and fetal monitoring devices in addition to medical software and provides them to over 70 countries in the world. In possession of core technologies associated with electro cardiac monitoring devices along with manufacturing technology, the company does not only provide real time feedback for customers, but also satisfies global quality management standard.

## Major Strengths

Trismed provides high quality and yet reasonably priced products based on the company's core technologies in association with electrocardiac signal analysis including 1/3/6/12 channel electrocardiac monitors, ergocardiographic monitors, Holter monitors, animal electrocardiac devices and patient monitoring systems to over 70 countries in the world. In addition to the patent for the printer module, which enables us to outperform competitors in durability and performance, the company continues its research to develop new solutions including its wireless communication module for home healthcare systems while upgrading current products in order to satisfy increasing customer demands. At present, the company's new products such as 'Stress ECG Module', 'Holter ECG', 'Fetal Doppler' and 'Fetal Monitor' are well received in overseas markets.
