

AED PROXIMUS®

VIDEO HEADPHONE

Innovative and professional device that allows to send and receive voice telephone calls and simultaneously transmit the video images observed by the operator to an operation center or to specialized support personnel. Specifically designed to provide remote support to anyone in need of, either for emergencies or for monitoring the operating situation in medical or technical field.

It's like having competent staff specialists at the rescuer's side, viewing and supporting operations in the best possible way, providing the appropriate suggestions and indications for the emergency or the working situation in place, and immediately localizing the device for providing other solutions if necessary.

The Video Headphone can be effectively utilized by anybody, as it can be activated by a simple push of a key/red button, or automatically after a prefixed number of rings or by activating the movement sensor. It exploits the mobile phone network diffusion and reliability at its best, keeping the vocal communication even in case of a weak signal restoring the images transmission as soon as possible.

The Video Headphone is safely fixed on the operator's head and is very stable even in highly dynamic situation. No training is required to the utilizer who can normally continue his operations being supported by someone remotely viewing everything on going in place. It can be customized in its form or dimension to fit to a protection helmet.

AED PROXIMUS®

There are moments time runs too fast and cannot be wasted...

moments you need a specialist beside you to save a life

unfortunately, it's not always possible to have his eyes beside you
