

# LentisCath<sup>+</sup>

HYDROPHILIC CATHETER WITH WATER SACHET

## Safety comes first

We are taking special care about our products' safety with respect to our users' health. For that reason we make our catheters from PVC - medical grade, free from aggressive softening agent phthalates and also free from latex.

## Smart handling

LentisCath + is pre-lubricated with hydrophilic coating and comes with sterile water sachet within the package. When the sachet is pressed, water is released and optimally hydrates the catheter making it just right for a smooth catheterization in only 25 seconds.

## Increased hygienic conditions in catheterization process

LentisCath + allows insertion without directly touching the catheter surface using a built-in no-touch device.

## Smooth and polished eyelets

Coated smooth polished eyelets prevent irritation during insertion and removal and ensure optimal urine flow.

## Compatibility

LentisCath+ has colour-coded funnels for each size. Each color represents predefined size making it easy for identification by user. Funnels are securely compatible with urine bags to prevent leakage.
