Ophthalmic & Medical Disposable Products

# Ophthalmic Viscoelastics (OVDs)

# OPHTHALMIC VISCOELASTICS (OVDs)

## Sodium Hyaluronate

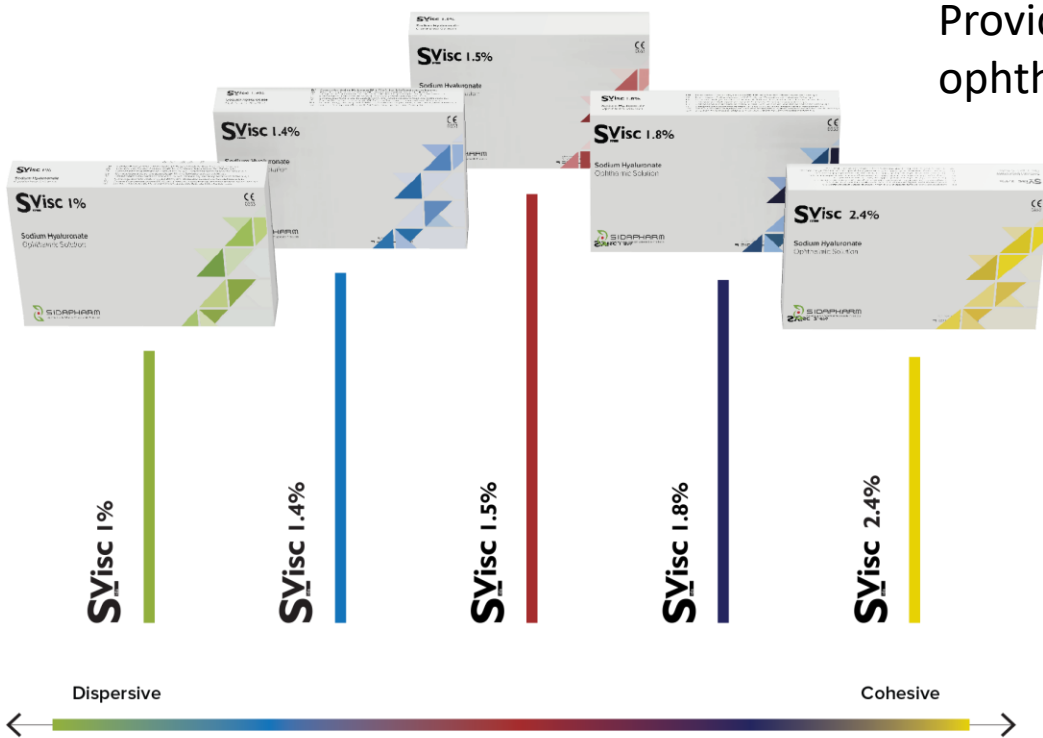

### Product Features :

- High viscosity for space creation during operations
- Very easy injection and removal from the eye
- Latex-free
- Provides excellent endothelial protection
- Ideal for cartridge lubrication during IOL implantation

# OPHTHALMIC VISCOELASTICS (OVDs)

## Sodium Hyaluronate

Provide the protection and control needed during ophthalmic procedures of :

- Cataract extraction
- IOL implantation
- Glaucoma filtering surgery
- Corneal transplantation surgery

# OPHTHALMIC VISCOELASTICS (OVDs)

Sodium Hyaluronate

Available Concentrations

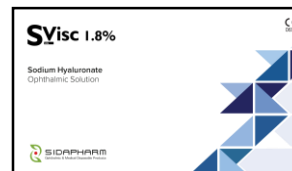

**SYisc 1%**

**SYisc 1.4%**

**SYisc 1.5%**

**SYisc 1.8%**

**SYisc 2.4%**

# OPHTHALMIC VISCOELASTICS (OVDs)

## HPMC 2%

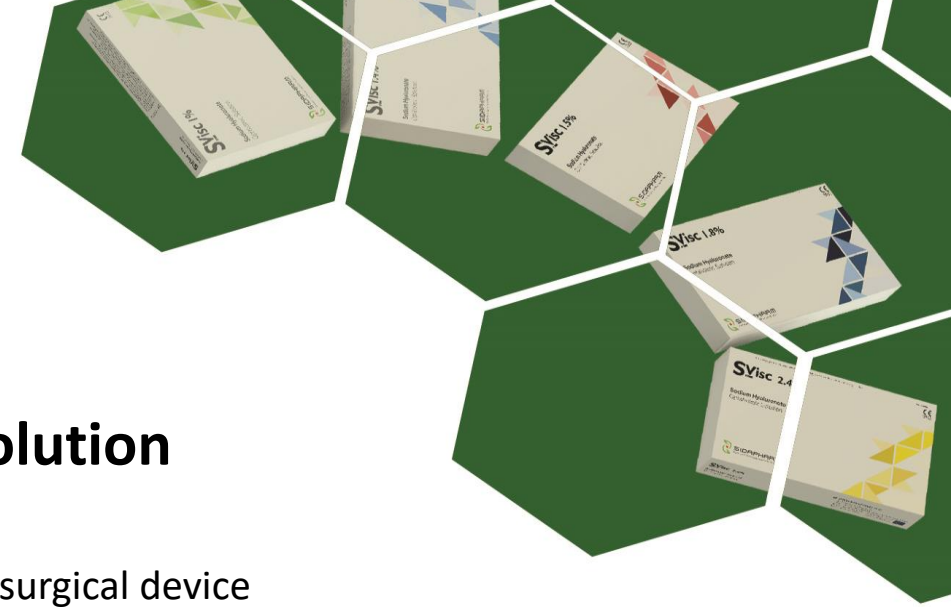

### Hydroxypropyl Methyl Cellulose (HPMC) Ophthalmic solution

KEY Product features :

- Low molecular weight and low surface tension
- High concentration of HPMC
- Non-antigenic (allergic)
- Non-pyrogenic
- Completely transparent
- Sterile pre-filled syringe supplied with a cannula
- Available in 2 ml luer-lock glass syringe
- Preservative-free
- Ambient Storage

Offering an ophthalmic viscosurgical device that has low viscosity properties and is ideal for coating and protecting the eye during anterior segment ophthalmic procedures.

HPMC 2% exhibits moderate viscoelasticity characteristics, with retentive but also excellent tissue coating abilities. Offers good space maintenance and excellent tissue protection throughout the ophthalmic procedure.
