Direct Solutions
for Living in Balance

Technology & Product Introduction

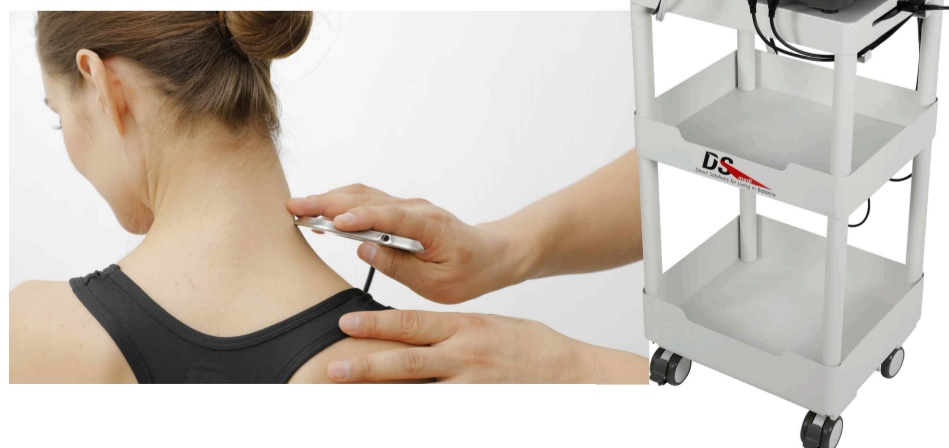

With pride, we would like to introduce our Top seller, VESTA, the Fascia & Cell Therapy System.

The unique feature of VESTA is that it optimizes Manual Therapy by simultaneously combining MFR(Myofascial Release) electrodes and RET RF with no sparks leading to speeding up the treatment time and effect.

This electro-therapy device also delivers LF electrical manipulation equipped with conductive gloves to trigger muscle contraction and fully activate therapy.

At the hands of a novice to a professional practitioner, one VESTA makes Manual Therapy successful and maximizes the all known Manual Therapy Techniques across various body parts.

DSmedi, Inc. Major Achievements

As a KGMP and ISO13485 certified manufacturer, we have developed 'RF Diathermy combined with Myofascial Release' and 'Ultrasonic Water Bath' therapy devices by reflecting the voices from the point of care. We are rapidly growing as a leading company in this field through actively supplying these inventive devices to the clinics and hospitals.

Based on the mutual trust with our partners, we have the regional distributors in the major areas of South Korea and the sales network are also being expanded to overseas countries such as Hong Kong, China, Taiwan, Singapore, Philippines, Russia, Finland and Canada.
